Education

University at Buffalo, Buffalo, NY **Expected Graduation Fall 2024**

B.S. Computer Science, GPA 3.97

Java, C, Python, Scala, JavaScript, HTML, CSS

OOP, DSA, Systems Programming, Discrete Mathematics

Work Experiences

Head Teaching Assistant **Spring 2023 to Present**

University at Buffalo Buffalo, NY

- Managed a diverse team of 34 TAs, effectively oversaw and facilitated productive operations and high levels of student engagement
- Supervised the grading process as the Lead Grading Teaching Assistant, ensuring accuracy, consistency, and timely feedback
- Collaborated with course instructors to address any grading-related concerns, clarify expectations, and resolve grading discrepancies
- Lead lab sessions, held office hours and provided support to students on key topics of Object Oriented Programming
- Offered clear and concise explanations of debugging steps, increasing students' understanding of the root causes of their problems
- Contributed with other TAs to the refinement of grading procedures, enhancing the quality and fairness of evaluating students
- Yielded in a 23% increase in student's average grades compared to the cohort's performance through effective teaching strategies in lab

Research Assistant **Fall 2020 to Summer 2021**

Purdue University West Lafayette, IN

- Researched on the usability and user experience of VR systems in immersive simulations of interpersonal relationships
- Collaborated with researchers and developers to understand project requirements and translate them into effective UX designs
- Analyzed user behavioral data to identify valuable patterns regarding user engagement and responses within the VR simulations
- Contributed to the development and maintenance of research databases, ensuring accurate and organized storage of research data
- Validated and analyzed incoming data to check information accuracy and integrity while independently addressed concerns

Projects

Dynamic Memory Allocator **Spring 2023**

- Developed a highly efficient dynamic memory allocator to supplant the standard heap memory functions in a Unix process
- Optimized memory management by implementing custom replacements for the standard malloc(), calloc(), realloc(), and free()
- Resulted in notable improvements in memory allocation performance, leading to enhancements in overall system efficiency
- Conducted rigorous and meticulous testing and debugging, ensuring every aspect was thoroughly examined
- Guaranteed its stability and compatibility, resulting in a functioning system that even supports demanding applications like Vim

Zhuoquns.com Personal Website **Summer 2023**

- Designed and developed a responsive website using HTML5, CSS3, and JavaScript and Git for version control
- Utilized media queries and flexible grid systems to ensure a seamless UI with a responsive design that adapts to different screen sizes
- Gathered and organized project details, case studies, and personal achievements to effectively showcase skills and experiences
- Employed advanced search engine optimization techniques by strategically incorporating pertinent keywords and metadata
- Conducted thorough testing across multiple browsers and devices to ensure cross-browser compatibility and smooth functionality
- Resolved any discrepancies or inconsistencies in the website's appearance and functionality, ensuring a seamless UI

OpenRocket Avionics Plugin **Fall 2022**

- Developed a Java plugin for the OpenRocket simulator, enabling users to seamlessly import and analyze personal avionics data
- Collaborated with software users to gather requirements and understand their needs, ensuring the plugin met their specific demands
- Conducted performance optimizations to improve the speed and efficiency of the plugin, enhancing the overall user experience
- Actively contributed to the development and improvement of the OpenRocket software itself, suggesting enhancements and providing valuable insights based on the experiences gained while developing the plugin
